Francisco Tovar (English A2)

I am a Web Developer with knowledge in Javascript and Java. I have done projects using Java and NodeJS as backend technology and ReactJS and Angular as frontend technology.

I have done high level studies learning the concepts of object oriented programming and design patterns in the stacks MERN (Mongo, Express, React and Node) and PERN(Postgresql, Express, React and Node). In recent years I have gained work experience and I have been fortunate to develop Java and Angular projects. Currently, I want to continue my personal and professional growth, in a workplace where the challenge to grow and improve is frequent.

Buenos Aires, Argentina
