ABOUT ME

I am a Software Developer with knowledge in TypeScript and Java. I have done projects using Java and Node as backend technology and React and Angular as frontend technology.

I have done high-level studies learning the concepts of object-oriented programming and design patterns.

EXPERIENCE

Software Engineer Fullstack

Tecnosoftware(BBVA)

Argentina

2023-PRESENT

- I have participated in various projects focused on improving functionalities of BBVA Argentina's home banking, including accessibility enhancements, login flow migration, and key management flow. I have actively contributed to backlog refinement and process documentation. Additionally, I have helped to improve performance and increase test coverage across these projects.

Software Engineer Fullstack

Tutenlabs

Argentina

2021-2023

- I contributed significantly to the architectural design and boilerplate setup of the Provider project's frontend using microfrontend technology, while also developing robust backend APIs. I was deeply involved in task refinement and project decisions.

SKILLS

Skills: React, Java, Node, Typescript, JavaScript, Spring boot, Express, Redux, Redux-Toolkit, Redux-Sagas, Jest, MaterialUI

PROJECTS

<https://codebakery-front.vercel.app/>

2021

Built an online e-commerce web application. The application was made so that the user had a comfortable experience(including responsiveness) and could purchase products quickly. It allows for payment with two payment methods (MercadoPago and Stripe) and performs authentication in two steps 2FA.

EDUCATION

Central University of Venezuela, Venezuela

Bachelor of Physics

2008-2015
